

Chevy the Charlotte Computer Science major is a senior computer science student at the University of North Carolina at Wilmington. Chevy, due to life changes, has to find a job in Charlotte in computer science. He needs an easy way to look at different jobs and compare different job opportunities side by side. His friends told him about CareerSift, an all-in-one job listing site that updates daily about new job listings. Chevy is not a big fan of signing up for job sites as they always send emails and he's iffy about giving up his information. Chevy decided to try CareerSift and noticed he did not have to log in to view all the listings. During his search he found a lot of jobs that match what he is looking for. Chevy did not have much time to apply, so he decided to save the listings. However, he had to make an account. He was skeptical at first, but when he noticed an email was not required he felt very relieved. Chevy signed up for the account and saved the job listings that interested him. When he had time, he went back to the job listings and applied for them via his saved view. When he was applying, he prioritized jobs that looked more important by using the compare view. After applying, Chevy had hope that he may have found a website that would serve him well. He entered his email address to the website so he would have information about job listings since he felt safe by the need to not have his email in the site.

Evan the Software Engineer is tired of his 5 day a week 8-5 job. He feels mistreated and hopeless within his current job. He talks to some of his previous friends from Charlotte if they have anything open he can take to get out of this environment. They all say they don't. Evan searches on google "computer science jobs in Charlotte" and gets directed to a website titled CareerSift. He clicks on the website hoping to find some job listings, and he was pleased with what he saw. He saw a lot of listings for computer science all located in or near Charlotte. He created an account and started looking for jobs. He saved each job that interested him and compared the jobs side-by-side to get ideas of what he should be paid and what to expect out of these new positions. He felt heard since he could filter based on languages, pay-range, and many other things. Evan finally found a job at a smaller company in Charlotte who recognized his talents and ensured he had a great work-life balance.
