Team Name - **CareerSift**

Sprint Name - **Sprint 1**

Backlog Refinement

Which changes, if any, did your team make to your product backlog?
We started working on implementing the formatting of the csv to a database readable by the front end to display listings to the users.
We began migrating existing python, html, and other essential files to a flask environment to host our application.

Rolled Over Tasks

Which tasks from the last sprint will be rolled over into this sprint, if any?
Finishing the second website (snagajob) for obtaining job listings.
Continuing to revise the database as the application develops.
Finishing up the html for Middleware to work with
Working on the CSS for the final project

Sprint Tasks

List out the tasks you have in this sprint, along with their story points and assignee. Add rows as needed.

Task Name	Assignee	Story Points
Wrapping up HTML to be more usable	**Adam**	**M**
CSS for website	**Adam**	**L**
Complete backend filling of database from Snagajob	**Jake**	**M**
Developing methods to interact with database	**Owen**	**L**

Team Name - **CareerSift**

Sprint Name - **1**

Stand Up Date - **November 17, 2024**

Copy the following block for every member of the team. If a team member is absent, list them down as absent. If the team member has a valid reason for the absence, like an illness, they should contact the TAs and/or instructor so they do not lose points for this stand up.

Owen

1. What have I accomplished -
    Built and modeled a database for our application. Written various methods for the application to be able to query the database.

2. What will I accomplish -
    Continue to build the database and its entities to carry out the required functionalities of our application. Adjust variable names and attributes appropriately. Add a new entity for messages. Continue to write python methods to handle application functionality. Begin migrating existing front, middle, and back end materials to a flask environment for testing.

3. What blockers do I have - My largest blocker is time, coursework for other classes and work are adding up a lot.

Update for Jake

4. What have I accomplished - I have accomplished an entire scraper for Indeed to populate a csv to give to Owen for a database.
5. What will I accomplish - I will get more information from the Snagajob website and output them to a csv for Owen to format into an output for Adam.
6. What blockers do I have - Time. Time is the hardest part of working on several projects at once.

Update for Adam

7. What have I accomplished - **A basic layout for the html for pages**
8. What will I accomplish - **Getting to the end of the HTML, making sure Middleware has something to work with, and CSS needs to be started**
9. What blockers do I have - **Motivation and work from other classes**

Blockers

After everyone gives updates, discuss and write down what your team will do to alleviate any blockers that came up in the meeting.

Team Name - **CareerSift**

Sprint Name - **1**

Answer the first three questions before moving on to your action items. There should be at least one item per the first three questions with a minimum of four items total, so at least one question will have more than one answer. In addition to an answer, list which team member contributed that answer. Once complete, move on to your action items, which you should write as a team. Come up with at least two action items.

What went well?

- **Owen - We were able to integrate existing parts of front, middle, and back end into a flask environment to start testing soon. We were also communicating very effectively through the sprint.**
- **Adam - We've made it pretty far into the project with very few problems since we all know what we're doing for the most part**
- **Jake - Integration from backend to frontend went very well. Communication was very effective and well done with each member of the team.**

What could have gone better?

- **Owen - We could have had more content ready to be integrated into the flask project. There are some missing parts preventing the beginning of testing our application.**
- **Adam - More motivation to work on the project, we're getting to the end and I feel burned out**
- **Jake - I wish I had more time in the day and more motivation to continue working on the project. This week was a rougher week in my personal life so I did not have much time to work on my project.**

What did we learn?

- **Jake - I learned that Owen is taking a very interesting approach for the website and I'm all for it. He is making his own style for login, object population, and other things.**
- **Adam - FIGMA KILLED ME, it burned me out badly**

What are our action items?

- **We will complete more of the front and middleware so that testing can commence. We will then begin testing the application soon after.**
- **We will all spend more time writing tests for each task we complete as there is more than one thing to do on the site**
- **We will continue to integrate more websites to get data for job listings to help show that we can get more than one site within the project.**
